Home Brewers

Submitting a sample of water is a simple task. We need 8 – 16 oz of water sent in any clean plastic container. Disposable plastic drinking water bottles work great, wash with soap and rinse 3 times with the water you are sampling for analysis and then fill the bottle. Make sure the bottle cap is securely fastened. The sample bottle needs to be shipped to the lab in a box or other type protective container along with your name, address, email address, sample ID and test desired. We have supplies available; however they are based on large quantities being shipped at one time. Thus we are requesting that you help us hold down the costs by using your own container(s). Payment (by check) can be included with the sample, or payment can be made after receiving the invoice with the analytical results. You can send a check or call us with credit card info. If you have other questions please email us at customerrep@wardlab.com or call 800-887-7645.
